Algorithmics I

General information about the quizzes

There will be three assessed quiz questions on moodle in weeks 2–9, giving a total of 24 quiz questions.

Quizzes can only be accessed after watching lecture videos and are closed at the end of the week of corresponding lectures (Friday at 23:59).

For each question a correct answer will score 1 mark, and an incorrect or missing answer will score 0 marks. Each student's best 15 marks for the quizzes (70% of the questions) will be calculated and converted to a percentage, which will then in turn be converted to a band for this component of the course assessment. Your band for the in-class quizzes will be published at the end of the course on the LTC system. The in-class quizzes collectively amount to 5% of the overall mark for the course.

Quiz questions will not be made available retrospectively and no submissions will be accepted outside of class. If you miss a lecture or examples class, you will automatically score 0 for the corresponding quiz question.

If you have a medical or other mitigating circumstances for missing a session, then you should let me know by email and provide supporting evidence where appropriate. **Do not submit good cause for missing quiz questions**. Any question that you miss in such circumstances will be treated as void. If k questions are missed due to good cause then your best $17 - k$ out of $24 - k$ answers will be aggregated, up to a maximum value of $k = 7$; if $k > 7$, then the entire quiz component of the assessment will be treated as void.
